Modifications are provided for information purposes only!

Supporters of CBTricks.com paid for the hosting so you would have this file.

CBTricks.com is a non-commercial personal website was created to help promote the exchange of service, modification, technically oriented information, and historical information aimed at the Citizens Band, GMRS (CB "A" Band), MURS, Amateur Radios and RF Amps.

CBTricks.com is not sponsored by or connected to any Retailer, Radio, Antenna Manufacturer or Amp Manufacturer, or affiliated with any site links shown in the links database. The use of product or company names on my web site is not endorsement of that product or company.

The site is supported with donations from users, friends and selling of the Site Supporters DVD's to cover some of the costs of having this website on the Internet instead of relying on banner ads, pop-up ads, commercial links, etc. Thus I do not accept advertising banners or pop-up/pop-under advertising or other marketing/sales links or gimmicks on my website.

All the money from donations is used for CBTricks.com I didn't do all the work to make money (I have a day job). This work was not done for someone else to make money also, for example the eBay CB sellers.

All Trademarks, Logos, and Brand Names are the property of their respective owners. This information is not provided by, or affiliated in any way with any radio or antenna Manufacturers.

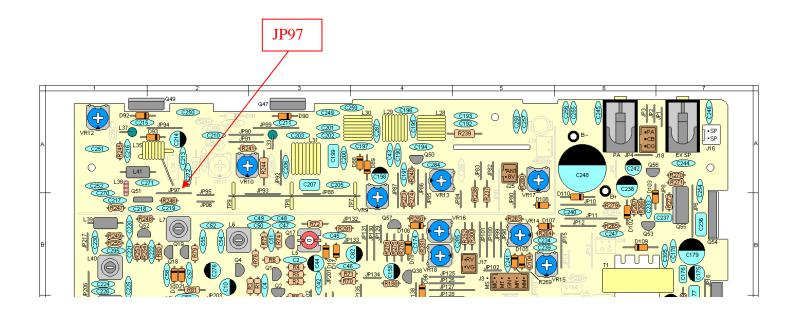

Thank you for any support you can give.

SX-175 Installation on the Galaxy 939, 949, 959 and Ranger 396, 696, 966 Radios

- 1. Unsolder and remove the wire going from the antenna connector to the circuit board.
- 2. Replace the radio's stock DC power jack with the supplied SX-175 power cord pig tail, and reconnect the radio's internal power wires.
- 3. Solder the red and black wires from the SX-175 to the pig tail wires. Make sure to heat shrink the connections!
- 4. Solder the center conductor from the coax marked "A" to the antenna connector center conductor. Solder the shield to chassis ground.
- 5. Solder the center conductor of the remaining coax to the hole where the antenna wire was removed from the PCB. Solder the shield of the coax to chassis ground.
- 6. Solder the 20 gauge red wire to JP97 (8 volt TX line). Do not remove JP97!
- 7. After double checking all connections, reset AM carrier (make sure front panel power control is full clockwise) to 40 watts.
- 8. NOTE: The SWR meter will only function properly if there is a switch installed in series with the 20 gauge red wire, and only when the switch is off. Adding this switch will also allow you to bypass the SX-175 and run the radio at its original output power.
